

Pesticide Residue Rapid Screening by Mass Spectrometry

Target Audience Farmers (up to 3 free tests per year)

Partner Organizations

Local Farmers' Associations, Cooperative Farms, or Regional Branches and Offices of the Agriculture and Food Agency

Sampling Guidelines

Sampling Time

2-7 days before harvest (fruits should be at least 80% ripe)

Sample Quantity

600 g of edible portion, with at least 2 units per sample

Random and scattered sampling

Seal samples in clean plastic bags to avoid cross-contamination

Advantages

Quick Testing Reports available within 1 day for timely decision-making

Precise Analysis Capable of clearly identifying trace levels of pesticide residues

Failed test results will not lead to penalties; instead, farmers will be advised to delay harvesting and improve pesticide use.
